

The new MÜLLER Ultra-Clean drum series

You want to clean your drums in a washing system or machine? Drums in the new MÜLLER Ultra-Clean series are perfectly suited for this treatment. They are designed so that cleaning fluids drain off ideally. No grooves or hollows where water can stagnate. The standard drum edging is seal welded; there is no gap where water can enter. Needless to say, these drums are interoperable with the entire Müller program.

Sanitary seal-welded edging

Geometry of beads and bottom optimized for clean discharge AND for drum cleaning

Details:

- Body, base and lid in stainless steel AISI 316L
